

# RATS & MICE

98% of human genes have a comparable gene in the mouse.

## Research Areas

Aging research  
Cancer research  
Cell communications  
Fertility  
Genetic diseases  
Immunotherapy  
Vaccine development

## Nobel Prize Winning Breakthroughs

Discovery of penicillin  
Development of yellow fever & polio vaccines  
Discoveries concerning cholesterol regulation  
Discovery of key immune system functions  
Development of in vitro fertilization  
Discoveries concerning the body's immune system  
Immunotherapy to fight cancer  
Development of treatments for malaria & roundworm parasites  
Discovery of HIV
